Statistical Report

OREGON 1960

UNITED STATES DEPARTMENT of AGRICULTURE
AGRICULTURAL STABILIZATION and CONSERVATION
State Office, Portland, Oregon

FOREWORD

This publication is a statistical report of some of the accomplishments in 1960 under the various programs administered by the ASC State and County Committees.

These programs are:

1. The Agricultural Conservation Program.
2. The Sugar Program.
3. The Soil Bank (Conservation Reserve) Program.
4. The Wool Program.
5. The Acreage Allotment and Marketing Quota Program.
6. The Commodity Loan Program.
7. The Farm Storage Facility & Mobile Dryer Loan Program.

These programs are administered in each county by a county committee comprised of three elected farmers and the county agricultural extension agent. There is an ASCS office in each county in the State with an office manager and staff in charge of the day to day operations. The county committee meets periodically as it deems necessary and establishes policies and guidelines for the office manager, makes determinations as required by law and regulations, hears appeals of farmers and exercises administrative oversight as needed.

The ASC committees and offices have many responsibilities and perform many functions that cannot be measured statistically. Therefore, it is hoped that this report will stimulate further inquiry for those looking through it who are not familiar with these programs and the way they are administered.

OREGON ASC STATE COMMITTEE

Roland E. Schedeen	- Chairman
Walter T. Irby	- Member
Jens Terjeson	- Member
Chas. W. Smith	- Member (Extension Service)
Arnold N. Bodtker	- State Executive Director

PART I

1960

**AGRICULTURAL
CONSERVATION
PROGRAM**

1960 AGRICULTURAL CONSERVATION PROGRAM

The Agricultural Conservation Program is an important part of a coordinated effort to help farmers attain soil and water conservation objectives. The total effort includes research, education, technical assistance, cost-sharing, and such indirect aids as credit.

Since its beginning in 1936, ACP has operated as a farmer-Government partnership by providing a share of the cost of approved soil - and water - conserving practices. ACP cost-sharing is made available for conservation over and above what farmers would carry out with their own resources and on their own initiative. Participation in the program is voluntary - all farmers are eligible.

The ACP is developed by the Agricultural Stabilization and Conservation Service County and State committees in cooperation with representatives of the Soil Conservation Service, Forest Service, Extension Service, Soil Conservation District Supervisors, and other agricultural agencies.

Federal cost-sharing payments made to Oregon farmers in connection with conservation practices carried out during the years 1936 to 1960, inclusive, total \$64,710,873. Since substantially more than half of the costs are borne by the farmer, it is estimated that during this period at least \$150 million were expended in Oregon by the farmers and the Government on ACP practices. This represents a significant contribution to the conservation and improvement of Oregon's soil and water resources.

The pages that follow contain tables showing detailed information as to accomplishments of the ACP during 1960 in each county in Oregon and for the State as a whole.

PART II

1980

SUGAR

BET

PROGRAM

THE SUGAR PROGRAM

The Sugar Program is designed to protect the welfare of consumers of sugar and of those engaged in the domestic sugar-producing industry and to promote the export trade of the United States. Attainment of these objectives involves (1) the determination of United States total sugar requirements; (2) the establishment of quotas to the various domestic and foreign sugar supplying areas; and (3) payments to domestic producers of sugar beets and sugar cane grown for the production of sugar; provided producers comply with certain labor, wage, price and marketing requirements prescribed by law.

Domestic sugar areas supply about 55 percent of total national requirements or a fixed 4,444,000 short tons, raw value, up to a requirement of 8,350,000 short tons, raw value, and about 55 percent of any requirement in excess of 8,350,000 short tons. Of the 4,444,000 tons the Act apportions 1,800,000 short tons to the domestic sugar beet industry.

Conditional payments to Oregon producers of sugar beets in 1960 were \$2.28 per ton of beets for the Umatilla area and \$2.32 per ton for the Baker-Malheur county area. The payment is based on a rate of 80 cents per 100 pounds of sugar commercially recoverable, raw value. A special tax of 50 cents per hundredweight of sugar, raw value, is imposed on all sugar processed in the United States and on all sugars imported for direct consumption. The annual tax collections usually exceed total conditional payments for a crop year by 15 to 20 million dollars.

Data for 1960-crop Oregon sugar beets is shown on the succeeding pages.

1960

SOIL BANK

PROGRAM

THE SOIL BANK PROGRAM

The Soil Bank Program consisting of two parts - the Acreage Reserve Program and Conservation Reserve Program - was authorized for five years operation beginning with 1956. Funds for operation of the Acreage Reserve part were not appropriated after 1958 and as a result only the Conservation Reserve Program was in operation in 1960.

The Conservation Reserve Program operated through contracts with farmers for retirement of cropland to conservation uses for periods varying from three to ten years at the option of the farmer. The contracted acreage could be neither cropped nor grazed. An annual rental payment was made for compliance with the contract with the amount per acre related to the relative productivity of the farm.

The Conservation Reserve contracts written effective for 1960 were the last authorized under the Soil Bank legislation.

On the next page is a table listing data for all contracts in effect in 1960.

* THE "REGULAR" RENTAL RATE APPLIED GENERALLY TO THE ACREAGE UNDER CONTRACT WHICH WAS DIVERTED FROM BASE CROPS (ANNUAL OR DEPLETING CROPS). THE "NON DIVERSION" RATE WAS LESS THAN THE REGULAR RATE AND APPLIED TO THE ACREAGE DIVERTED FROM OTHER THAN BASE CROPS. IN 1959 AND 1960 IF THE WHOLE FARM WAS CONTRACTED THE REGULAR RATE WAS APPLIED TO THE ENTIRE ELIGIBLE ACREAGE.

1960

COMMODITY LOAN

AND

PURCHASE AGREEMENT

PROGRAM

PART IV

1980

COMMODITY LOAN

AND

PURCHASE AGREEMENT

PROGRAM

1960 COMMODITY LOAN AND PURCHASE AGREEMENT PROGRAM

Commodity Loans and Purchases are one phase of the Price Support Program designed to help stabilize the agricultural economy and to provide a means for more orderly marketing of certain commodities.

In Oregon, Barley, Corn, Honey, Oats, Rye and Wheat are the major commodities produced which are eligible for price support through loans and purchase agreements. Dry Edible Beans and Flaxseed are also eligible, but because of a combination of market prices and low production, no applications for loans or purchase agreements have been received in the last few years.

Producers of the price supported commodities may apply for loans based on specified price support rates providing the commodities meet certain quality requirements. The support value of commodities under loan or purchase agreement remains constant regardless of market fluctuations. This allows the producer a choice in marketing his commodity; to forfeit the commodity at the price support value in satisfaction of his loan or to repay the loan and sell on the open market, whichever is to his advantage.

Marketing prices were generally close to effective support rates during the 1960 marketing years. This resulted in less than normal loan activity and an increase in loan repayments in relation to prior years.

The following pages of this section outline the activity under this program for the 1960 crop year.

ALLOTMENT

PROGRAM

PRODUCTION ADJUSTMENT - WHEAT ALLOTMENTS

Agricultural legislation provides for a National Wheat Acreage Allotment of the number of acres of wheat which, at average yields, will maintain a supply equal to 130 percent of a normal year's domestic consumption and exports. The national allotment for 1960 was established at the minimum of 55,000,000 acres provided in the law.

The National wheat acreage allotment was apportioned to the States on the basis of the acreage considered seeded for the production of wheat as grain during the ten year period 1949-1958 with adjustments for trend and for abnormal weather conditions. The Oregon share of the National allotment was 833,433 acres for 1960.

The State Committee set aside a reserve of 2,000 acres for new farms, appeals, and corrections, then distributed the remaining 831,433 acres to counties on the same basis as that on which the National allotment was apportioned to the States.

County committees set aside reserves in accordance with their experience as to needs for appeals and corrections, then apportioned the remaining acreage to all old wheat farms on the basis of the farm history record of production for the years 1955-1958 with appropriate adjustments for abnormal weather, rotations, or changes in operation.

County data is shown on the next page for the 1960-crop wheat.

PRODUCTION ADJUSTMENT - MARKETING QUOTAS

Agricultural legislation requires the Secretary to proclaim a national wheat marketing quota when the total supply of wheat exceeds the normal supply by more than 20 percent. A "normal supply" of wheat is a year's domestic consumption and exports plus a 20 percent reserve.

The proclamation of the national wheat acreage allotments and national marketing quota must be made by May 15 each year. A referendum must be held by July 25 and at least two-thirds of growers voting must approve quotas if they are to be in effect.

When marketing quotas are in effect up to 15 acres of wheat can be harvested without penalty even though the farm allotment is zero or less than the 15 acres harvested. With prior approval of the county committee, a producer can harvest up to 30 acres of wheat for use on the farm as feed, seed, or food. Any producer having an allotment of over 15 acres who overplants the allotment is subject to a marketing quota penalty on each excess bushel in an amount equal to 45 percent of the May 1 parity price on wheat. Any producer who exceeds his allotment is not eligible for price support on his wheat and, for 1959 and subsequent years, is credited only with his allotment as wheat history for that year.

Any producer who is dissatisfied has the right to appeal his marketing quota to a review committee appointed by the Secretary. Appeals must be filed with the county committee in writing within 15 days after the date of mailing of any official notice of allotment, wheat acreage excess, or marketing quota excess.

State data is shown on the next page for 1960-crop wheat.

WOL

INCENTIVE

PROGRAM

WOOL INCENTIVE PROGRAM

Under the National Wool Act of 1954, as amended, wool is recognized as an essential and strategic commodity which is not produced in sufficient quantity in the United States. It is the declared policy of Congress as a measure of national security and in the promotion of the general economic welfare to encourage an annual domestic production of approximately 300 million pounds of shorn wool.

To encourage this increased production a support level of 62 cents per pound has been established. The net price received by wool producers throughout the nation for the wool marketing year of April 1 through the following March 31 is determined. A rate of incentive payment then is computed which is that percentage necessary to increase the national net price received by producers to the 62 cents per pound support level. Payments are made to wool growers by applying this percentage rate to the net price received for the shorn wool marketed by the individual producer during that marketing year.

Incentive payments are made to lamb producers to encourage them to market lambs unshorn, thus contributing to the increase in the production of wool. The unshorn lamb payment is based on 80 percent of the shorn wool payment on a ratio of 5 pounds of wool per 100 pounds of liveweight. Generally speaking, the amount of payment is then determined by the increase in weight of unshorn lambs during the ownership of the producer or feeder.

The following pages outline the activity from the inception of the program to date.

***FARM STORAGE
FACILITY LOAN
PROGRAM***

FARM STORAGE FACILITY AND MOBILE DRYER LOAN PROGRAM

The facility loan program and the dryer loan program are a supplement to the commodity loan and purchase program.

Facility loans are available to producers of price supported crops for the construction of farm facilities to store these crops. Generally, loans are limited to 80 percent of the out-of-the-pocket cost of construction and are repayable in four equal annual installments at a per annum interest rate of four percent. The construction of these facilities allows the producer to store his grain after harvest, with or without benefit of price support, and to market the grain at the time of greatest advantage rather than being forced to market at harvest time when prices are usually lowest.

Mobile dryer loans are available to those producers who have capacity for storing price supported crops and provide a means for conditioning the grain for safe storage. Dryer loans are repayable in three equal annual installments at a per annum interest rate of four percent. There were no dryer loans disbursed in 1960.

The following pages outline the activity under these programs.
